

Procedures for Licensing the Operation of a Newly Established Oil Mill.

First: Required Documents

- Certified copy of the lease or ownership contract of the land on which the project is established.
- Certified copy of the tax card indicating the activity (cottonseed oil extraction).
- Certified copy of the commercial register indicating the activity (cottonseed oil extraction).
- Approval from the General Organization for Industrialization to establish a cottonseed oil extraction project, or approval from the Investment Authority in case the project is located in new cities.
- Approval from the local unit or city council to establish the project.
- Approval from the Ministry of Environment.
- Approval from Industrial Safety.
- Engineering drawing of the project approved by the administrative authority (local unit).
- Contract for the supply of electric power at low voltage.
- Copy of the national ID card of the responsible manager (licensed agricultural engineer).

Second: Building Requirements

- Adequate storage spaces according to the number of extraction units.
- A dedicated room for the agricultural engineer assigned by the Seed Testing and Certification Administration to supervise the mill's operations.
- A weighing scale (truck scale or platform scale).

Third: Required Procedures

- Application form No. (19) with the prescribed stamp.
- Submission of the above-mentioned documents to the Seed Testing and Certification Administration in the governorate where the mill is located.
- The responsible authorities in the governorate conduct an inspection report of the project and collect inspection fees.
- The inspection report must state the committee's opinion on whether the mill is suitable for operation or not.
- The previous documents, along with the inspection report, site sketch, and supply order, are submitted to the General Administration for Gins and Oil Mills in Giza through the Seed Testing and Certification Administration in the governorate, to take the necessary measures for final inspection and trials in preparation for issuing the operating license.
